

## **Vacancy for Project Employee**

Applications are invited for the above post in the Rehabilitation Bioengineering Group at Department of Biotechnology, IITM. The successful candidate is expected to work on a Government of India funded project. This project will involve design and development of medical devices for rehabilitation/performance enhancement. Candidates are expected to have an undergraduate degree in relevant engineering disciplines (electronics, communication, biomedical, mechanical, etc). A computational background or experience with analog design will be an added advantage. This post will initially be offered on a contract basis for one year and can be extended. Remuneration and designation will be fixed based on selected candidates qualification and experience.
